Summer Stress Mix II

Summer Stress Mix II *is a mixture of three turf type tall fescue varieties composing 90% of the mix with Perennial Ryegrass composing the remaining 10% of the mixture. The mixture is blended to be more price competitive, while using highly rated varieties as components. This mixture will be best for customers with a limited budget, but still having to maintain high quality turf. Components are selected for a diversity of genetic traits to produce quality turf under a range of environmental conditions.*

Characteristics:

- **Summer Stress Mix II** is perfectly adapted wherever Turf Type Tall Fescues are used and with 10% Perennial Ryegrass, **Summer Stress Mix II** provides a useable turf quickly
- Includes the combined genetic strengths of four elite Bluegrasses for exceptional disease resistance
- Provides superior recuperative potential for high traffic areas

Recommended Uses:

Athletic Fields, Playgrounds, Home Lawns, Parks

Climatic Zones:

1, 2, 3, 4, 5, 6, 7, 8 (may not be adaptable to all areas within each climatic zone)

Establishment & Maintenance:

Germination begins in approximately 6 to 14 days. **Summer Stress Mix II** responds best to no more than ½ lb. of Nitrogen per 1000 sq ft per growing month. Repeat applications only as grass show need by fading color. Apply 5 lbs. Nitrogen per 1000 sq ft maximum per year. A mowing height of 2 - 3" (50.8 – 76.2 mm) is recommended.

Seeding Rates:

- New Seedings 300-400 lbs/ acres
  (135 – 180 kg/100 sq meters)
- Supplemental Seeding 100-200 lbs/acre
  (112-224 kg/hectare)
