

*Festuca arundinacea*

*Rebel Exeda* is a high performance, dark green, fine textured tall fescue. It is a cool season perennial grass that develops an extensive fibrous root system. **Rebel Exeda** is recommended for use on premium home lawns, sports fields and other high traffic areas, and park settings. **Rebel Exeda** is suited for use by the turf professional as well as the discriminating homeowner.

**Characteristics:**

- Exceptional upright growth habit
- Good Seedling Vigor & High tiller density
- Exceptional Green Color
- Tolerates low water input and heavy traffic wear.
- Does not thin out at a low cutting height of 1 1/2 - 2 1/2 inch
- Outstanding performance in the transition zone.
- Exceptional fall density.

**Recommended Use:**

Golf Courses (Roughs), Sod Farms, Athletic Fields, Parks, and Home Lawns

**Climatic Zones:** 3, 5, 6, 7, 8 (may not be adaptable to all areas within each zone)

**Establishment & Maintenance:**

Sow in sun or shade in spring or fall. Mid-summer sowing is not recommended except for areas of dense shade that can be well watered. Lime soil to 5.5 – 6.0 pH and follow soil test recommendations for fertilization. Maintain adequate soil moisture for proper germination. Under ideal conditions, germination may begin in as few as 9 days. Full germination may take up to 21 days. First mowing is suggested when plants reach approximately 2 inches. (7.5 cm).

**Seeding Rates:**

- |                      |  |
|----------------------|--|
| • Parks & Home Lawns | 8 - 10 lbs/1000 sq ft<br>(3 1/2 - 5 kgs/100 sq meters) |
| • Fairways & Roughs  | 5 - 10 lbs/1000 sq ft<br>(2 – 5 kgs/100 sq meters)     |
| • Athletic Fields    | 10 - 15 lbs/1000 sq ft<br>(5 –7 kgs/100 sq meters)     |
| • Sod Farms          | 8 - 10 lbs/1000 sq ft<br>(3 1/2 - 5 kgs/100 sq meters) |

This variety was bred and developed at Rutgers University in New Brunswick, NJ.
