

## Turf Type Tall Fescue Blend

*Signature Series Blend is a lower growing, dark green tall fescue blend which forms a dense turf for sod production, home lawns, parks, athletic fields, and golf course roughs. It contains three elite tall fescue varieties, 50% Plantation, 30% Signia and 20% Rebel Exeda. These varieties are moderately low growing, fine textured and persistent under tough environmental conditions. Signature Series has been a top-performing blend throughout the transition zone and has shown good disease resistance to Brown Patch, Fusarium Patch, and Net Blotch.*

### Characteristics:

- Superior dark green color
- Good spring green up
- Fine leaf texture
- Moderately low growing
- Good disease resistance

**Recommended Use:** Golf Courses (Roughs), Athletic Fields, Parks, Home Lawns, and Sod Farms

**Climatic Zones:** 3, 5, 6, 7, 8 (may not be adaptable to all areas within each climatic zone)

### Establishment & Maintenance:

Insure good seed to soil contact when planting. The first mowing may be expected after 30 days, or when the grass blades reach a length of 3 inch (76.2 mm). Mow back to 2 inch (50.8 mm) until turf is established. Limited use of the area can be expected in 6 weeks. **Signature Series** optimum mowing height is 1.5 - 2.5 inches (38.1- 63.5 mm) but can be adjusted higher or lower depending upon maintenance practices and intended use. **Signature Series** has a low to moderate nitrogen requirement with 2 - 3 pounds of actual N per 1,000 square feet per year adequate in most situations. It requires significantly less water than perennial ryegrass and Kentucky bluegrasses to maintain a lush, green, vigorous stand.

### Seeding Rates:

- |                      |   |
|----------------------|---|
| • Home Lawns         | 8 - 10 lbs/1000 sq. ft.<br>(3 1/2 - 5 kg/100 sq meters)     |
| • Golf Course Roughs | 300 lbs/acre<br>(34 kgs/hectare)                            |
| • Sod Production     | 400 - 600 lbs./acre<br>(448 - 672 kgs/hectare)              |
| • Re-seeding         | 3 - 5 lbs/1000 sq. ft.<br>(1 1/2 - 2 1/2 kgs/100 sq meters) |

**Signature Series** may be mixed with 5-10% Kentucky Bluegrass such as Blue Star or Chateau to produce a more luxurious and fine textured turf with excellent recuperative abilities.
